

CoreValues Alpha Greater China Growth ETF
Trading Symbol: CGRO
Listed on NYSE Arca, Inc.
Summary Prospectus
February 2, 2026
www.CVAFunds.com

Before you invest, you may want to review the CoreValues Alpha Greater China Growth ETF (the “Fund”) statutory prospectus and statement of additional information, which contain more information about the Fund and its risks. The current statutory prospectus and statement of additional information dated February 1, 2026 are incorporated by reference into this Summary Prospectus. You can find the Fund’s statutory prospectus, statement of additional information, reports to shareholders, and other information about the Fund online at www.CVAFunds.com. You can also get this information at no cost by calling at 855-316-3778 or by sending an e-mail request to info@cvafunds.com.

Investment Objective

CoreValues Alpha Greater China Growth ETF (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses¹ (expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.89%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.00%
Acquired Fund Fees and Expenses	0.00%
Total Annual Fund Operating Expenses	<u><u>0.89%</u></u>

¹ The Fund’s adviser will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act, and litigation expenses, and other non-routine or extraordinary expenses (the “Excluded Expenses”).

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem or hold all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Year	5 Year	10 Year
\$91	\$284	\$493	\$1,096

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the Example above, affect the Fund’s performance. For the fiscal year ended September 30, 2025, the Fund’s portfolio turnover rate was 93% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing primarily in equity securities of companies operating in high-growth sectors in Greater China, which includes mainland China, Taiwan, and China’s special administrative regions, such as Hong Kong. The Fund’s sub-adviser, MSA Power Funds LLC (the “Sub-Adviser”), seeks to develop a portfolio with a goal to capture the growth in these companies with operations in Greater China. The strategy is driven by the Sub-Adviser’s “core values” approach, which targets accessing economic growth and seeking to capture economic gains or “alpha” in China without falling afoul of US sanctions or compromising American values or national interests (please see “Additional Information about the Fund” below for more information).

The Fund will primarily invest in equity securities of growth companies that are exposed to the economies in Greater China. The Fund will seek to achieve its investment objective by investing in a portfolio of equity securities of companies operating in what the Sub-Adviser views as high-growth sectors, including, but not limited to, Communication Services, Consumer Discretionary, Consumer Staples, Financials, Health Care, Industrials, and Information Technology.

The allocation across sectors and company weighting within the Fund’s portfolio will be based on the Sub-Adviser’s top-down macro research, with the aim of identifying sectors with the greatest growth potential. The Sub-Adviser analyzes relevant publicly available data, including data reflecting economic growth, inflation, interest rate, consumption, industry and sector trends, and public policy and regulations. In addition, the Sub-Adviser conducts “on-ground” due diligence. That is, the Sub-Adviser gains insights from employees located in China who are aware of local, publicly available information, consumption behaviors, and trends in China in real time. The Sub-Adviser also conducts a “bottom up” analysis of individual companies through fundamental analysis. In particular, the Sub-Adviser analyzes company-specific data, including financial reporting data, balance sheet information, cash flow data, corporate governance information, management expertise information, and product and market opportunity information. The weight of each sector and company in the Fund’s portfolio will be determined based on the Sub-Adviser’s assessment of its growth potential and will change over time.

The Fund may invest in issuers listed on exchanges outside of China, including issuers listed in Hong Kong, Taiwan and the United States. However, the Fund’s investments are expected to be principally listed in the U.S. The Fund’s investments in U.S. companies will focus on companies that derive a meaningful portion (e.g., above 15%) of their sales from Greater China. The Fund also may invest in issuers listed in China and may invest in China A-shares (“A-Shares”), which are common stocks and other equity securities that are listed or traded on a Chinese stock exchange, and which are quoted in renminbi. The Fund expects to access A-Shares through the Shanghai-Hong Kong Stock Connect program and the Shenzhen-Hong Kong Stock Connect program (together, “Stock Connect”). The Fund may also access securities of companies through the qualified foreign investor (“QFI”) program or by other means that become available in the future.

The Fund’s investments in equity securities may also include depository receipts. The Fund’s investments in depository receipts may include American, European, and Global Depository Receipts (“ADRs,” “EDRs,” and “GDRs,” respectively). ADRs are receipts that represent interests in foreign securities held on deposit by U.S. banks or trust companies. EDRs and GDRs have the same qualities as ADRs, although they may be traded in several international trading markets.

Additional Portfolio Attributes

The Fund’s portfolio will generally consist of between 30 and 40 securities. The Fund may invest in small-cap, mid-cap, and large-cap companies.

The Fund is classified as a “non-diversified” investment company under the Investment Company Act of 1940, as amended, which means that the Fund may invest a high percentage of its assets in a fewer number of issuers.

The Fund, under normal circumstances, invests at least 80% of its net assets in common stocks and other equity-related securities of companies operating in high-growth sectors in Greater China. For purposes of the 80% investment policy, Greater China includes mainland China, Taiwan, and China’s special administrative regions, such as Hong Kong. The Fund considers a company to be operating in Greater China if it (1) is organized under the laws of, or maintains its principal place of business in, Greater China; (2) has at least 50% of its assets physically located in Greater China; (3) derives 40% or more of its gross revenue or profits from goods produced or sold, investments made, or services provided in Greater China at the time of the Fund’s investment; or (4) is primarily traded on the Chinese, Taiwan, or Hong Kong exchanges.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which it appears. Some or all of these risks may adversely affect the Fund’s net asset value per share (“NAV”), trading price, yield, total return, and/or ability to meet its investment objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Fund - Principal Risks of Investing in the Fund.”

China Investing Risks. The Chinese economy is generally considered an emerging market and can be significantly affected by economic and political conditions and policy in China and surrounding Asian countries. A relatively small number of Chinese companies represent a large portion of China’s total market and thus may be more sensitive to adverse political or economic circumstances and market movements. The economy of China differs, often unfavorably, from the U.S. economy in such respects as structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, allocation of resources and capital reinvestment, among others. The Public Company Accounting Oversight Board (“PCAOB”), which regulates auditors of U.S. public companies, has warned that it lacks the ability to inspect audit work and practices of PCAOB-registered accounting firms in China and Hong Kong. The PCAOB’s limited ability to oversee the operations of accounting firms in China and Hong Kong means that inaccurate or incomplete financial records of an issuer’s operations may not be detected, which could negatively impact the Fund’s investments in such companies. Under China’s political and economic system, the central government has historically exercised substantial control over virtually every sector of the Chinese economy through administrative regulation and/or state ownership. In addition, expropriation, including nationalization, confiscatory taxation, political, economic or social instability or other developments could adversely affect and significantly diminish the values of the Chinese companies in which the Fund invests. International trade tensions may arise from time to time which can result in trade tariffs, embargoes, trade limitations, trade wars and other negative consequences. These consequences may trigger a reduction in international trade, the oversupply of certain manufactured goods, substantial price reductions of goods and possible failure of individual companies and/or large segments of China’s export industry with a potentially severe negative impact to the Fund. From time to time and as recently as January 2020, China has experienced outbreaks of infectious illnesses, and the country may be subject to other public health threats or similar issues in the future. Any spread of an infectious illness, public health threat or similar issue could reduce consumer demand or economic output, result in market closures, travel restrictions or quarantines, and generally have a significant impact on the Chinese economy.

Sector Risks. To the extent the Fund invests more heavily in particular sectors of the Chinese economy, its performance will be especially sensitive to developments that significantly affect those sectors. The Fund may invest a significant portion of its assets in the following sectors and, therefore, the performance of the Fund could be negatively impacted by events affecting each of these sectors.

- **Communications Services Sector. Companies** in the Communications Services Sector are subject to extensive government regulation. The costs of complying with governmental regulations, delays or failure to receive required regulatory approvals, or the enactment of new adverse regulatory requirements may adversely affect the business of such companies. Companies in the Communications Services Sector also can be significantly affected by intense competition, including competition with alternative technologies such as wireless communications (including with 5G and other technologies), product compatibility, consumer preferences, rapid product obsolescence, and research and development of new products. Technological innovations may make the products and services of such companies obsolete. Media content creation carries risks of changing consumer tastes and running afoul of regulatory content guidelines, which could result in large fines or the loss of regulatory licenses. Media companies collect significant amounts of personal consumer data and are at risk of data breaches and fines for the unauthorized and unplanned public release of sensitive consumer data.
- **Consumer Discretionary Sector.** The consumer discretionary sector may be affected by changes in domestic and international economies, exchange and interest rates, competition, consumers’ disposable income, consumer preferences, social trends and marketing campaigns.
- **Consumer Staples Sector.** Investing in the consumer staples sector, which encompasses companies producing or selling essential products like food and household items, presents distinct challenges. Companies in this sector face fierce competition with numerous established brands fighting for market share. Additionally, fluctuations in commodity prices can impact production costs, and regulatory changes or global trade tensions can affect supply chains and profitability. Furthermore, shifts in consumer preferences, driven by health trends or sustainability concerns, can also pose risks.

- **Financials Sector.** The financials sector can be significantly affected by changes in interest rates, government regulation, the rate of defaults on corporate, consumer and government debt, the availability and cost of capital, and fallout from the housing and sub-prime mortgage crisis. Insurance companies, in particular, may be significantly affected by changes in interest rates, catastrophic events, price and market competition, the imposition of premium rate caps, or other changes in government regulation or tax law and/or rate regulation, which may have an adverse impact on their profitability. The financial sector has experienced significant losses in the recent past, and the impact of more stringent capital requirements and of recent or future regulation on any individual financial company or on the sector as a whole cannot be predicted. In recent years, cyber-attacks and technology malfunctions and failures have become increasingly frequent in this sector and have caused significant losses.
- **Healthcare Sector.** Companies in the Healthcare sector are subject to extensive government regulation and their profitability can be significantly affected by restrictions on government reimbursement for medical expenses, rising costs of medical products and services, pricing pressure (including price discounting), limited product lines, and an increased emphasis on the delivery of healthcare through outpatient services. The costs associated with developing new drugs can be significant, and the results are unpredictable. Newly developed drugs may be susceptible to product obsolescence due to intense competition from new products and less costly generic products. Moreover, the process for obtaining regulatory approval by governmental regulatory authorities is long and costly and there can be no assurance that the necessary approvals will be obtained or maintained. The values of many companies in the Healthcare sector also are dependent on the development, protection and exploitation of intellectual property rights and other proprietary information, and the profitability of these companies may be significantly affected by such things as the expiration of patents or the loss of, or the inability to enforce, intellectual property rights.
- **Industrials Sector.** Companies in the Industrials Sector can be significantly affected by supply and demand for specific products or services and for Industrials Sector products in general; a decline in demand for products due to rapid technological developments and frequent new product introduction; government regulation, world events and economic conditions; and the risks associated with potential environmental damage and product liability claims.
- **Information Technology Sector.** Market or economic factors impacting information technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability. Information technology companies and companies that rely heavily on technology also may be prone to operational and information security risks resulting from cyber-attacks and/or technological malfunctions.

Growth Investing Risks. The Fund will invest in companies that appear to be growth-oriented. Growth companies are those that the Sub-Adviser believes will have revenue and earnings that grow faster than the economy as a whole, offering above-average prospects for capital appreciation and little or no emphasis on dividend income. If the Sub-Adviser's perceptions of a company's growth potential are wrong, the securities purchased may not perform as expected, reducing the Fund's return.

Equity Market Risk. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks, such as those held by the Fund, are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors. Factors that could impact the market value of an equity security include a company's business performance, investor perceptions, stock market trends and general economic conditions.

Foreign Investment Risk. The Fund will invest in foreign securities, including non-U.S. dollar-denominated securities traded outside of the United States and U.S. dollar-denominated securities of foreign issuers traded in the United States. Returns on investments in foreign securities could be more volatile than, or trail the returns on, investments in U.S. securities. Investments in foreign securities, including investments in American Depositary Receipts (ADRs), European Depositary Receipts (EDRs) and Global Depositary Receipts (GDRs), are subject to special risks, including the following:

- Foreign Securities Risk.** Investments in non-U.S. securities involve risks that may not be present with investments in U.S. securities. For example, investments in non-U.S. securities may be subject to risk of loss due to foreign currency fluctuations or to political or economic instability. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may be subject to different accounting, auditing, financial reporting and investor protection standards than U.S. issuers. Changes to the financial condition or credit rating of foreign issuers may also adversely affect the value of the Fund's securities. Investments in non-U.S. securities may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks. Because legal systems differ, there is also the possibility that it will be difficult to obtain or enforce legal judgments in some countries. Since foreign exchanges may be open on days when the Fund does not price its Shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's Shares. Conversely, Shares may trade on days when foreign exchanges are closed. Investment in foreign securities may involve higher costs than investment in U.S. securities, including higher transaction and custody costs as well as the imposition of additional taxes by foreign governments. Each of these factors can make investments in the Fund more volatile and potentially less liquid than other types of investments.
- Depository Receipt Risk.** The Fund's investments in foreign companies may be in the form of depository receipts, including ADRs, EDRs, and GDRs. ADRs, EDRs, and GDRs are generally subject to the risks of investing directly in foreign securities and, in some cases, there may be less information available about the underlying issuers than would be the case with a direct investment in the foreign issuer. ADRs are U.S. dollar-denominated receipts representing shares of foreign-based corporations. GDRs are similar to ADRs but are shares of foreign-based corporations generally issued by international banks in one or more markets around the world. Investment in ADRs and GDRs may be more or less liquid than the underlying shares in their primary trading market and GDRs may be more volatile. Depository receipts may be "sponsored" or "unsponsored" and may be unregistered and unlisted. Sponsored depository receipts are established jointly by a depository and the underlying issuer, whereas unsponsored depository receipts may be established by a depository without participation by the underlying issuer. Holders of an unsponsored depository receipt generally bear all the costs associated with establishing the unsponsored depository receipt. In addition, the issuers of the securities underlying unsponsored depository receipts are not obligated to disclose material information in the United States and, therefore, there may be less information available regarding those issuers and there may not be a correlation between that information and the market value of the depository receipts. In general, ADRs must be sponsored, but the Fund may invest in unsponsored ADRs under various limited circumstances. It is expected that not more than 10% of the net assets of the Fund will be invested in unsponsored ADRs. The Fund's investments may also include ADRs and GDRs that are not purchased in the public markets and are restricted securities that can be offered and sold only to "qualified institutional buyers" under Rule 144A of the Securities Act of 1933, as amended (the "Securities Act"). The Adviser will determine the liquidity of these investments pursuant to guidelines established by the Board. If a particular investment in ADRs or GDRs is deemed illiquid, that investment will be included within the Fund's limitation on investment in illiquid securities. Moreover, if adverse market conditions were to develop during the period between the Fund's decision to sell these types of ADRs or GDRs and the point at which the Fund is permitted or able to sell the security, the Fund might obtain a price less favorable than the price that prevailed when it decided to sell.

Emerging Markets Risk. Investments in securities and instruments traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments. For example, developing and emerging markets may be subject to (i) greater market volatility, (ii) lower trading volume and liquidity, (iii) greater social, political and economic uncertainty, (iv) governmental controls on foreign investments and limitations on repatriation of invested capital, (v) lower disclosure, corporate governance, auditing and financial reporting standards, (vi) fewer protections of property rights, (vii) restrictions on the transfer of securities or currency, and (viii) settlement and trading practices that differ from those in U.S. markets. Each of these factors may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Shares to decline in value.

Geographic Investment Risk. To the extent the Fund invests a significant portion of its assets in the securities of companies of a single country or region, it is more likely to be impacted by events or conditions affecting that country or region.

The remaining principal risks are presented in alphabetical order. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears.

Economic and Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), deflation (or expectations for deflation), interest rates, global demand for particular products or resources, market instability, financial

system instability, debt crises and downgrades, embargoes, tariffs, sanctions and other trade barriers, regulatory events, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Fund's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics. The imposition by the U.S. of tariffs on goods imported from foreign countries and reciprocal tariffs levied on U.S. goods by those countries also may lead to volatility and instability in domestic and foreign markets.

ETF Risks.

- *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Costs of Buying or Selling Shares.* Buying or selling Shares involves certain costs, including brokerage commissions, other charges imposed by brokers, and bid-ask spreads. The bid-ask spread represents the difference between the price at which an investor is willing to buy Shares and the price at which an investor is willing to sell Shares. The spread varies over time based on the Shares' trading volume and market liquidity. The spread is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Due to the costs of buying or selling Shares, frequent trading of Shares may reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
- *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
- *Trading.* Although Shares are listed on a national securities exchange, such as the NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Sub-Adviser's success or failure to implement investment strategies for the Fund.

Market Capitalization Risk.

- *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
- *Mid-Capitalization Investing.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large-capitalization stocks or the stock market as a whole.

- *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.

Newer Fund Risk. a recently organized management investment company The Fund is with a limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decisions.

Newer Sub-Adviser Risk. The Sub-Adviser is a recently formed entity and has only limited experience with managing an exchange-traded fund regulated under the 1940 Act. As a result, there is no long-term track record against which an investor may judge the Sub-Adviser’s effectiveness.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Performance

The following performance information provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance over time. The bar chart shows the annual returns for the Fund from year to year. The table illustrates how the Fund’s average annual total returns for the 1-year and since inception periods compare with those of a broad measure of market performance. The Fund’s past performance, before and after taxes, does not necessarily indicate how it will perform in the future. Updated performance information is available on the Fund’s website at www.CVAFunds.com.

During the period of time shown in the bar chart, the highest quarterly return was 22.73% for the quarter ended September 30, 2024, and the lowest quarterly return was -12.82% for the quarter ended December 31, 2025.

**Average Annual Total Returns
For the Period Ended December 31, 2025**

	1 Year	Since Inception (10/16/2023)
Return Before Taxes	19.99%	16.84%
Return After Taxes on Distributions	19.19%	16.09%
Return After Taxes on Distributions and Sale of Shares	12.22%	22.95%
S&P 500 Index (reflects no deduction for fees, expenses, or taxes)	17.88%	24.17%

After-tax returns are calculated using the historical highest individual federal marginal income tax rates during the period covered by the table above and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Shares through tax-deferred arrangements such as an individual retirement account ("IRA").

Management

Investment Adviser

Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, serves as investment adviser to the Fund.

Investment Sub-Adviser

MSA Power Funds LLC serves as investment sub-adviser to the Fund.

Portfolio Managers

Ben Harburg, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2023.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2023.

Charles A. Ragauss, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2023.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

Information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, the median bid-ask spread for the Fund's most recent fiscal period, can be found on the Fund's website at www.CVAFunds.com.

Tax Information

Fund distributions are generally taxable to shareholders as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser, the Sub-Adviser, or their affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.
